Important disclosures are provided at the end of this report.

Global growth slowing down; India steady

Stubbornly high inflation print worldwide has nudged global central banks on rate hike spree. Both Fed and BoE raised rates by 75bps to tame accelerating inflation. BoE has also warned of 'long and painful recession'. ECB too has raised rates. Furthermore, IMF in its bi-annual World Economic Outlook report has projected global growth to slow down to 3.2% in CY22 (6% in CY21) and expects further moderation to 2.7% in CY23. Against this backdrop, global yields have surged. On the currency front, dollar continued to strengthen further with INR depreciating by 1.7% in Oct'22. Softening of global demand has resulted in moderation of oil prices. Global food prices have also edged down to 9-month low, signalling some possible relief from high inflation. Domestically, RBI is likely to continue with monetary tightening in line with other Central Banks.

Mixed signals for domestic demand: On the back of the festive surge, consumption demand improved as has been reflected by higher auto sales (retail vehicles), robust credit growth (17.9% in Oct'22 against 5.7% in Oct'21) and buoyant GST collections (2nd highest level since inception). However, moderation in power demand and fertilizer sales has raised some concerns over the strengthening of domestic demand. On the agri front, rabi sowing has begun with sown area of pulses and oilseeds higher compared with last year.

Centre's finances remain healthy: Centre's fiscal deficit (% of GDP, 12MMA basis), was unchanged at 6.4% in Sep'22, despite pick up in spending. Ahead of upcoming state elections, centre's overall spending rose considerably in Sep'22 and in H1FY23 it is up by 12.2% versus 8.9% during Apr-Aug'22. Both

capex (49.5% versus 46.8%) and revenue expenditure (6%versus 3%) increased. This was also supported by sharp increase in centre's net revenues (8.2% versus 2.9%). Driven by festive spending and higher prices, indirect tax collections rose (11.8% versus 11.2%). Non-tax revenues also improved (-1.7% versus -21.4%). Going forward, higher expenditure can be expected on account of food and fertilizer subsidies. In addition, with negligible room to raise excise duty, expected drop in custom duty collections as commodity prices ease, weak trend in disinvestment receipts, pressure on fiscal deficit will remain.

India's 10Y yield rising: Global yields continued to inch up as US Fed, ECB, and BoE all hiked policy rates again. Stubborn inflation data has led to central banks reaffirming tightening stance until it cools down significantly. In Oct'22, US 10Y yield inched up (MoM) by 22bps. In Nov'22 so far (MTD) it is further up by 11bps. In comparison (MoM), UK's 10Y has gone up by 2bps and India's 10Y yield by 2bps. We continue to expect a terminal repo rate of 6.5% as RBI aims to tame rising inflation. CPI inflation in Oct'22 is estimated to have eased to 6.8% from 7.4% in Sep'22.

INR to remain range-bound: INR depreciated by 1.7% in Oct'22 and fell to another record-low as Fed indicated a higher than expected terminal Fed fund rate. Higher oil prices and negative FPI flows also contributed to the weakness in the rupee. However in Nov'22, INR has regained some of its losses mostly on the back of waning dollar strength. INR trajectory in the near-term is likely to be governed by the movement in DXY. We believe INR is likely to trade in the range of 82.5-82.95/\$ in the near term.
