31 May 2021

### Macro developments

- As per CMIE data, India's unemployment rate (30-day moving average) jumped to its highest since Jun'20 at 11.58% as of 28 May 2021 from 10.26% last week. Both rural and urban unemployment rate rose considerably to 10.57% (from 9.4%) and 13.86% (from 12.17%) respectively. However, with easing Covid-19 cases (1.5mn versus 2mn last week) and gaining mobility, this data is likely to show improvement.
- Japan's industrial production rose by 2.5% in Apr'21 on a MoM basis from an increase of 1.7% in Mar'21. This was led by higher production of general purpose machinery (16.1%) and electrical machinery (10.9%). Demand for capital goods from China and US rose led by a recovery in growth. On the other hand, production in auto and transport equipment dipped.
- China's official manufacturing PMI eased a tad to 51 in May'21 from 51.1 in Apr'21. This was led by dip in new orders (51.3 from 52 in Apr'21), particularly export orders (48.3 from 50.4 in Apr'21). Surge in prices of raw materials, higher shipping costs and Yuan appreciation explain the drop. However, non-manufacturing PMI rose to 55.2 in May'21 from 54.9 in Apr'21.
