Robots for Kitchen

With the current pandemic situation putting back focus on cloud kitchens and QSR as relevant formats, the culinary experience is undergoing a major shift not only for the consumers but also for how food brands operate and actually concoct the food. The taste and price still remain the two most significant factors that help to ensure customer engagement.

The commercial kitchens are silently upgrading themselves by ushering in new technologies and kitchen robots are being introduced across all formats. According to **Statistica**, the sales value of new robot installations will peak at around 523 million U.S. dollars in 2022.

While Covid has accelerated the need for automation in commercial kitchens, such automated products are already available in the market for the last few years. Robot chefs have previously appeared at places like **Creator**, a burger restaurant in San Francisco, and **Dal.komm** Coffee outlets in South Korea.

In 2016, Singapore-based **Zimplistic** launched **Rotimatic** that uses machine learning to make bread and takes about a minute to make one roti. Launched in 2018, **Spyce**, a Boston based robo-centric restaurant has revamped itself and features an all new automated cooking system, a dynamic, customizable menu, and in-house delivery. **Spyce's** new food robot makes both salads and warm bowl food, and holds 49 separate recipes.

How Mastercard is enabling digital solutions for MSMEs

Delayed payments leading to problems in cash flow for businesses is one of the main problems faced by entrepreneurs in the MSME sector. This has become more pronounced during the COVID-19 pandemic.

The MSME sector is highly heterogeneous, where microlevel businesses like one or two-people shops, face more problems in terms of formal financial inclusion.

30th June 2021

With salad bars shut down during pandemic, California-based **Chowbotics** has started getting more inquiries about **Sally**, a robot about the size of a refrigerator that makes a variety of salads and bowls. Sally lets customers choose from 22 prepared ingredients stored inside the machine. It can make around 65 bowls a day before kitchen workers need to refill the ingredient.

Blendid sells a robot kiosk that makes a variety of fresh smoothies. Customers can order from a smartphone app and tweak the recipe if they want more kale or less ginger, for example. Once or twice a day, a Blendid employee refills the ingredients.

Later this year, London-based robotics company **Moley** will begin selling the first robot chef, according to the Financial Times. The company claims the ceiling-mounted device, called the **Moley Robotics Kitchen**, will be able to cook over 5,000 recipes and even clean up itself when it's done.

With the pandemic situation still looming, it is easy to see why many kitchens would like to look for alternative sources of labour. Moreover, in the post-pandemic world, we believe that technology-enabled experiences clubbed with unique recipes will have a significant bearing in attracting the new world customers to dine-out.

The shift to digital payments: Empowering rural areas to make transactions seamless

The Indian government has been long trying to enter the realms of a cashless economy and fully incorporate digital payments as a universally accepted mode of transaction, even in the rural pockets of the country. But it was only in the bleak times, hauled by the Covid-19 pandemic, that monetary digitalisation picked up the pace.

It has emerged as a silver lining for the digital financial sector in India. To provide a digital push, specifically in rural India, the Ministry of Electronics and IT (MeitY) launched a scheme called "Digital Finance for Rural India: Creating Awareness and Access through Common Service Centres (CSCs)".

RBI ban on new credit cards sale hit mkt share; will come back with a bang once embargo lifted: HDFC Bank

The RBI's ban on selling new credit cards has impacted market share on an incremental basis, HDFC Bank said on Wednesday, promising to get back to the market "with a bang" once the "temporal" embargo is lifted and recoup the losses.

The bank's head of consumer finance, digital banking and information technology, Parag Rao, said that it has used the last six months to "introspect, re-engineer and innovate" about the cards business, where it has 15.5 million customers.

3 top e-wallets paving the way for a cashless India

India is slowly but surely paving its way to a cashless society. The rise in mobile app development technology and the easy availability of mobile devices has changed the way the payment gateway industry is transforming. This has given rise to a number of mobile wallets or digital wallets. A mobile-based wallet where one can store cash for making online payments. There are various types of mobile wallets in India, such as open, semi-open, semi-closed and closed — depending on the type of usage and payments that can be made.

The use of e-wallets are growing rapidly as they help in increasing the speed of transaction, for e-commerce companies and all online marketplaces have integrated with such mobile wallets to make transactions seamless. With the launch of UPI, it has become even easier, as the transfer happens directly from the bank account rather than from a wallet. Here are 3 e-wallets that are making waves in the Indian industry:

UK's fintech startup Tide lays out its India plan for next 5 years

Tide Platform Ltd., a UK-based fintech startup that helps small firms open business accounts, plans to invest £100 million (Rs 1,000 crore) and create 1,000 jobs in India over the next five years. These jobs will be across roles — including product and software development, marketing, risk and compliance, and member support. The company currently has over 200 employees in India, primarily at its technology centre in Hyderabad.

India was the first international market where Tide launched operations in 2020. "Tide recognises the ambitions of both the UK and Indian governments to build India-UK bilateral relationships with an enhanced economic partnership and sees SMEs as being crucial to economic growth in both nations," Tide CEO Oliver Prill said in a statement on Tuesday. "Tide is committed to serving the 64-million and growing Indian SME sector and will help unleash the true potential of Indian small businesses."
