The request for clarification and the response shall be in writing, and no change in the substance of the tender shall be sought, offered, or permitted. The Bank reserves the right to accept or reject any tender in whole or in parts without assigning any reason thereof. The decision of the Bank shall be final and binding on all the vendors to this document and bank will not entertain any correspondence in this regard.

○ Eligibility cum Technical Bid

Eligibility criterion for the Vendor to qualify this stage is clearly mentioned in Annexure 02 – Eligibility Criterion Compliance to this document. The vendor would need to provide supporting documents as part of the eligibility proof. The Technical Proposal will be evaluated for technical suitability as per the proposal and implementation plan submitted by the bidder.

The Bank's officials would visit reference sites provided by the bidder if deemed necessary. The reference site which will be visited by the bank officials should be installed with the proposed make. The Bank at its discretion may reject the proposal of the bidder in case the responses received from the site visited are negative or the hardware does not meet Bank's technical /functional requirement and / or in case there are no such reference sites with the requirement detailed above.

○ Commercial Bid Evaluation

The vendor who achieves the required cut – off technical score as part of technical evaluation shall be qualified for commercial bid opening. The commercial bid would be evaluated based on a "Total Cost of Ownership" ('TCO') basis. The key considerations of the TCO would be the total payouts for entire project through the contract period of 5 years, discounted at 10% to arrive at the present value of the future cash outflows. The evaluation will be done as follows:

- ▶ The discounted rate will be calculated on yearly basis based on the formula $A/(1+i/100)^n$ where A= Total Value in each Year; i=10% and n =Year.
- ▶ The Present Value will be calculated for all components where the payment is recurring year on year. The Present Value for the component will start from the year of purchase of that component / start of the services (AMC) and shall be calculated till the end year of the contract. Further n - number of period will be '0' in the year of purchase of that component / start of the services and subsequently increased by 1 for subsequent years.

Any component / service for which the payment is a One Time Cost the NPV cost of the equipment / service for that year will be considered and the relevant year's NPV cost will be added as part of the Present Value calculation for that year. Further the payment of the OTC component / service not being recurring in nature hence the present value for that component / service will be considered in the year of purchase only and not in subsequent years.

Annexure 10–Scope of Work

A. Project Scope

Bank is having the DC infrastructure facility includes fourteen (14) Precision AC units which cool the server/network/UPS farm to maintain the temperature and humidity.

These units are running continuously 24x7 which cools the server/ network/UPS farm. Bank will procurement of new PAC units at DC which has to be considered on priority to avoid the failure of existing PAC units.

Bank will award the contract to the successful vendor and the vendor should deliver the service with the scope as briefed below:

1. Detailed Scope of work :

Bank of Baroda is having 14 PAC units out of which 8 are dedicated for server farm of which 7 are being used for cooling while one is kept as standby. 2 PAC each are dedicated for Network room, UPS room 1 and 2 of which 1 is active and other is passive. Replacement of PAC units has to be planned in a way to minimize the impact on cooling of server farm as the activity is to be done in live environment. The vendor shall ensure that no damage is caused during the dismantling, movement, replacement or mounting of PAC units otherwise the vendor will be liable to replace the damage caused free of cost.

The vendor shall stock sufficient spares to carry out timely repair and maintenance to keep downtime of the specific PAC unit being replaced as minimum as possible. Tools and Test instruments: The vendor shall also have necessary tools and test instruments during the replacement activity.

The activity should be executed in two phases (however the final activity schedule will be decided and agreed between the Bank and the successful vendor):

(a) First Phase - Removal of existing PAC from the live environment by maintaining the farm desired temperature and also without causing any physical damage / change in server farm (either by dismantling PAC unit or as a single unit). In order to maintain the temperature of the farm while replacing the PAC units the vendor should have arrangement for alternate cooling units if required.

Carry out all Civil, Interior, Electrical and BMS related work to replace PAC unit including: -

- Dismantling of existing setup
- False Floor tile cutting as per the new PAC placement
- False Ceiling Works
- Grid Ceiling works
- Laying of additional cable
- Power cabling & MCB provision for new PAC
- Supply and Fixing of power sockets
- Connecting with existing earthing system.
- Copper piping works.
- Air balancing in the grills
- Synchronizing the new units with existing units
- Civil works for copper pipe and drain pipe routing
- Thermal insulation below the false floor, AC ducts, water supply pipes, floor grills.

- The unit supplied should have minimum redundancy of (N+1).
- Dismantling and Fixing of all applicable doors in the DC for entering and exit of PAC units
- Floor Insulation
- POP and Painting
- Housekeeping etc.
- Lifting, shifting and positioning of existing PAC units and installation of new units
- 11. Commissioning activities
- Humidifier piping
- Indoor stands supply.

(b) Second Phase - Installation of new PAC unit in live environment without encumbering the working condition of DC.

2. Design consideration

- a) High performance Chilled water based Perimeter cooling unit.
- b) Precision ACs are required to be installed in Server room, Network room and UPS room.
- c) The design of the unit should be optimized for use in data center with cooling output to maintain the return air temperature at 23 degrees centigrade and humidity at 50 +-5 % with chilled water input at 8-10 degrees.
- d) The PACs should provide uniform, effective, affordable cooling for UPS, servers and similar IT equipment (switches etc.) installed in Racks.
- e) The Cooling unit design should achieve maximum efficiency and minimize the electrical energy consumption.
- f) The flow characteristics of the cooling unit should be optimized for the minimum possible pressure loss on the air side. This in turn should minimize the energy consumption of the fans.
- g) The high-performance cooling unit should guarantee maximum cooling output even at high water inlet temperatures, enabling the proportion of operation in combination with indirect free cooling to be maximized and operating costs reduced accordingly.
- h) The Condensate and leakage management should be integrated in the cooling unit. The water connection to cooling unit should be realized optionally either from top or bottom by way of an accessory kit.
- i) An intelligent sensor network should monitor the air and water temperatures, as well as the water flow rate and leakage management.
- j) The cooling unit should be integrated with optical screen to enable the display of all physical parameters of the unit.
- k) The temperature sensors in the water inlet / return should also be integrated into thermo wells and should similarly be exchanged / replaced without interrupting operation.
- l) The monitoring and alarm management for all physical parameters should be realized via Modbus.
- m) The cooling unit should be integrated with software / controller concept, which provides for automatic control and monitoring of the unit. The units should be integrated with the existing BMS system (Siemens Desigo Insight 6) for centralized monitoring purpose.

3. Technical specifications of the construction of unit

- a) **General** - The AC Units should have high sensible heat ratios, to match high sensible loads of Server room, Network room and UPS room. The system should be suitable to take thermal

inputs and adjust its operation accordingly so as to achieve highest levels of performance and efficiency.

- b) **Design Requirements** - The system shall be factory assembled. It shall be floor mounted, optimized for maximum cooling capacity in a minimum footprint. It shall be specifically designed for service from the front of the unit. The system shall be designed for draw-through air arrangement to ensure even air distribution to the entire face area of the coil. The unit shall modulate cooling capacity and airflow based on requirements. The unit shall be ready to allow the installation of shackles for top handling. Fork lift handling should be possible as well. Currently Bluestar PCL80DV (10 nos) and PCL63DV (4 nos) PACs are there with dimensions 2500*880*1950 and 2050*880*1950 respectively. Solution provided should be compatible to the existing size and if it is less then covering the remaining area with tiles and other patch works would be in scope of vendor only. Base frames for placing PAC units are already in place, in-case new frames need to built then entire responsibility of the work would also reside with vendor only. Please note the current equipment load bearing capacity of base frames is 400kg in case of PCL63DV and 500kg for PCL80DV and that of floor is 1500kg.
- c) **Quality Assurance** - The specified system shall be factory end of line tested (functionality test) before shipment and designed to meet CE requirements. The system shall be designed and manufactured according to world-class quality standards. The manufacturer shall be ISO 9001 certified. Factory visit may be scheduled before dispatch of PAC units based on banks requirement
- d) **Cabinet** - The cabinet should be manufactured from galvanized steel sheet, externally painted with **RAL7021 color (or equivalent shade)** epoxy-polyester powder paint and assembled using stainless steel screws and high tensile rivets. Panels should be having double coating, fireproof insulation, noise emission control and heat loss control. The frontal panel(s) should be assembled on hinges to make the access easier. The rear and side panels should be screwed to the supports or directly to the frame.
- e) **Cooling circuits** – Chilled water circuit should be incorporated of copper pipes, a modulating motorized valve, air relief valves (two way butterfly valves being used currently). The coil should be corrosion resistant and manufactured from copper tubes and should be with a stainless steel condensate drain pan.
- f) **Fan section** - The unit should be fitted with minimum two direct-driven, high-efficiency, single-inlet, backward curved, centrifugal 'plug' type innovating EC fans. The fans should have an impeller with curved blades corrosion resistant. The fan motors should be Electronically Commutated, IP54, with internal protections, continuous speed regulation via controller signal. The motor should be three-phase with IP54 protection; provided with internal thermal protection. The fan wheel should be statically and dynamically balanced with self-lubricating bearings.
- g) **Humidifier** - The humidification system should be having an electronic control ~~infrared~~ **infrared / electrode** humidifier suitable for use with water of varying degrees of hardness. The cleanable stainless steel humidifier pan should be removable from front of the unit. The humidifier should be having a self-adapting flow control system, which monitors and controls the electrical current passing through the cylinder.
- h) **Heating / Reheating** - Heating control should be of the ON-OFF type incorporated with Miniature Circuit Breakers (MCBs). The heaters should be phase balanced and provided with a manual reset safety thermostat to disable them in the event of a high temperature.

- i) **Air filtration** - The standard filtration unit of grade G4, filters with 90 % down to 10 microns efficiency.
- j) **Intelligent Aisle Containment** - The unit shall be ready for containment smart control. The unit should have the capability to modulate airflow according to the airflow taken by the equipment's. The control shall be done in order to have minimum differential pressure between inlet and outlet of the containment. The compressor capacity shall be modulated according to the supply temperature in order to optimize server inlet temperature. The system done by multiple units shall work with efficient cascade way, trying to maximize energy efficiency always working where EC Fans are more effective.
- k) **Monitoring** - The unit shall be supplied with card suitable for both SNMP & ModBus connectivity. The unit shall also include input for remote on-off and volt-free contacts for simple remote monitoring of low and high priority alarms, high / low temperature, fan / control failure and others should be available.
